WORLD TOBACCO SUPPLY AND DISTRIBUTION, 1959-77

This circular is a compilation of world tobacco supply-distribution data covering 112 countries for the 19-year period, 1959 through 1977.

The correlation coefficient between world cigarette production and leaf consumption, independently derived and plotted below, is .998.

The data are based on U.S. Agricultural Attache reports, official publications, international organization reports, trade journals and reports, and are supplemented with estimates and statistical derivations. Subjective judgements were made in cases where input data were inconsistent, contradictory, or unavailable. The Tobacco Division invites comments and/or revised documented data.

The following are given as guides to the user to the S&D tables:

- All weights other than farm production are shown in dry (redried) weight.
- Where available, trade data are from published reports by the country. Exports include reexports.
- Consumption includes manufacturers' use and industrial waste and loss.

UNMANUFACTURED TOBACCO CONSUMPTION AND CIGARETTE PRODUCTION, 1959-77

July 1978

WORLD CIGARETTE PRODUCTION AND TRADE UP IN 1977

World cigarette production and trade both increased during 1977 despite an escalation of antismoking activity and rising cigarette prices in many countries. Global output increased an estimated 2 percent from 4,051 billion pieces in 1976 to 4,127 billion in 1977. Lower output in the United States, West Germany, France, and the United Kingdom was more than offset by significant boosts in the People's Republic of China (PRC), the Soviet Union, Japan, and Brazil, plus smaller increases in most other countries.

Larger cigarette exports by the United States and the European Community (EC) are primarily responsible for a 9 percent jump in estimated world cigarette exports from 242 billion pieces in 1976 to 265 billion in 1977. The share of filter-tip cigarettes continued to expand in most countries but at a slower pace as the saturation point is approached.

UNITED STATES. U.S. cigarette output decreased 4 percent in 1977 from the record 1976 level of 693 billion pieces. Manufacturers worked off stocks as domestic use was up 1 percent and exports jumped 9 percent to a record 66.8 billion sticks.

U.S. per capita consumption dropped 1 percent but an increase in the smoking age population more than offset the drop. Per capita consumption by persons 18 and over was estimated at 4,064 cigarettes, down from 4,092 in 1976 and 7 percent below the record 4,345 pieces of 1963. Government and health organizations' antismoking efforts are largely responsible for the erosion of the per capita consumption figures. Intensified antismoking efforts in 1978 will likely reduce the per capita figures even more but total domestic consumption is expected to remain at about the 1977 level of 620 billion pieces.

Cigarette exports contributed a record $615 million to U.S. trade accounts in 1977, up 21 percent from 1976. The volume increased 9 percent and the average value rose 11 percent from $8.30 per 1,000 to $9.20 per 1,000. Export volume continued up during the first 4 months of 1978, with a 10 percent rise primarily the result of 48 percent larger shipments to Iran. Exports in calendar 1978 are forecast at about 74 billion pieces valued at $740-$750 million.

SOVIET UNION. The Soviet Union's tenth 5-year plan (1976-1980) was the first to give detailed attention to the tobacco producing and cigarette manufacturing sectors. The plan calls for a substantial increase in production of filter cigarettes, accompanied by a reduction in output of nonfilter brands and a sharp curtailment of papyrosa output. In this plan, production of cigarettes and papyrosa by 1980 is 440 billion pieces, one-sixth more than the estimated 1977 output.

BELGIUM-LUXEMBOURG. Some increase in 1977 cigarette output is chiefly attributed to larger exports, mainly to the Netherlands, of U.S. cigarette brands domestically manufactured under licensing arrangements. Domestic sales of cigarettes declined by about 2 percent, primarily because of the economic recession during 1977 and a two-phase price increase totaling 25 percent. Per capita consumption of cigarettes dropped from 1,987 pieces in 1976 to 1,950 in 1977. Smoking tobacco consumption, on the other hand, jumped from 491 grams to 502 grams during the same period, reflecting increased use of roll-your-own cigarettes.

The outlook for 1978 is for a continuing decline in cigarette sales with smoking tobacco and cigarillo sales gaining. Another retail cigarette price increase of about 5 percent is expected in the near future.

FRANCE. For the second year in a row, French cigarette production has declined. Total domestic retail sales, however, realized a 3.2 percent gain because of the dramatic increase in the sales of imported cigarettes, which were up 30.7 percent in 1977. The share of imported cigarettes accounted for 13.1 percent of total retail sales in 1977.

The share of American-type cigarettes, which reached 17.6 percent in 1977, is expanding mostly at the expense of filter French-type cigarettes.

The outlook appears optimistic for increased sales of American-type cigarettes. Total French consumption may level off in the short term because of the issuance of new antitobacco instructions, but is

expected to recover in the mid-term. Domestic output in 1978 will likely fall in the lower end of the 82-96 billion-piece estimate.

WEST GERMANY. The German cigarette industry's total output dropped by 6 percent in 1977 as a 12 percent decline in domestic sales was only partially offset by a one-third increase in exports. A price boost of 17 percent on January 1, 1977, was largely responsible for the dramatic decrease in domestic sales.

In addition to the direct price-rise effect on demand, hoarding late in 1976—in anticipation of the increase—tended to distort the 1976/77 sales pattern. Other factors contributing to the lower sales include a slowdown in the domestic economy and a continuing reduction in the number of foreigners employed in West Germany.

The sale of smoking tobacco was up an estimated 15 percent as more smokers shifted to the cheaper roll-your-own alternative. The price increase on January 1, 1977, did not apply to the smoking tobacco or cigar sectors of the industry. An estimated 15 to 20 percent of the German smoking population now roll their own cigarettes.

For 1978, a partial recovery in the domestic market and a continuation of the uptrend in exports is anticipated.

ITALY. Cigarette production increased 2 percent in 1977, but sales remained relatively unchanged. Sales of domestic brands were stagnant while sales of imports increased 8 percent. Foreign brands produced in Italy under license declined 10 percent.

The leading cigarette brand increased sales by 7 percent in 1977 and made up 54 percent of all Italian brands sold. Sales of the leading imported brand were up 19 percent.

In April 1978 the average price of cigarettes was boosted 20 percent. This rise will likely temper any increase in the sales of domestic brands in the current year. Output will likely fall near the low-end of the 68-81 billion piece estimate.

NETHERLANDS. Cigarette production in the Netherlands jumped 20 percent in 1977. Increased border sales and domestic hoarding late in the year inflated the 1977 output figures. Actual per capita consumption increased an estimated 4-7 percent from 1,491 in 1976 to between 1,550 and 1,600 in 1977.

Increased border sales to West Germany were the result of an average 23-cent-per-pack price difference between Dutch and German brands. The volume of this border trade increased an estimated 50 percent from 2 billion pieces in 1976 to 3 billion in 1977.

Dutch smokers began to hoard cigarettes in December 1977 when it was announced that a 15.5 percent price increase would take effect February 1, 1978. That increase will likely reduce 1978 consumption by about 2 percent. That price rise also reduced the average price differential with German brands to less than 10 cents per pack. Thus, the border trade will likely drop by a third or more.

A significant drop in actual cigarette output to about 25,000 million sticks is expected. This would, however, still be 11 percent above the 1976 level.

UNITED KINGDOM. British cigarette production fell in 1977, although the drop was a nominal 1 percent. However, a sharper decline (3.5 percent) was realized in domestic consumption. The main factors affecting the domestic market were declining consumer purchasing power and the continuing rise in retail cigarette prices. In addition, a vigorous antismoking campaign continued to be a significant element.

Cigarettes with the tobacco substitute, which entered the market July 1, 1977, failed to capture the targeted 5-6 percent market share. Some producers of substitute-containing cigarettes cut production of these types drastically while one major producer destroyed its unsold stock. The total market share of cigarettes containing substitutes was estimated to have reached a high of 2 percent shortly after being introduced and has steadily declined from that point.

The United Kingdom continued as the world's third largest exporter of cigarettes in the past year. An 11 percent increase in shipments was mainly the result of larger purchases by other EC countries and Saudi Arabia.

Prospects for the current year appear somewhat brighter. With a sharp upturn in consumer expenditures, some strengthening in the pound sterling, and a minimal increase in tobacco duties expected in 1978, output could reach 160 billion pieces.

JAPAN. Japanese cigarette production recovered in 1977 after dropping in 1976 and reached a record 297 billion pieces. An estimated 35 million Japanese smokers consumed approximately 300 billion cigarettes or about one pack a day each. Reportedly, an antismoking drive is gaining momentum in Japan. It will likely have little effect on consumption in the near term.

Imports, which make up only about 1 percent of consumption, dropped by one-tenth.

Exports of cigarettes on the other hand, while not achieving their 1974 record levels, increased 24 percent.

The outlook is for increased production of cigarettes as consumption edges forward at a normal pace and imports remain relatively insignificant. Output will likely fall near the center of the 293-334-billion pieces estimate.

POLAND. Polish cigarette production increased less than 1 percent in the past year. Yet, the share of filter-tip production increased from 33 to 37 percent.

Cigarette imports were estimated at 1 billion pieces in 1977, compared with fewer than 650 million pieces in 1976.

There are no major changes expected in the Government's tobacco production or processing policies. The outlook is for continued efforts to improve processing facilities and 1978 production will likely increase marginally to about 92 billion pieces.

BULGARIA. Bulgaria continued to make cigarettes for export, with an estimated four-fifths of the total output moving into export channels. However, the country lost its traditional spot as the world's largest exporter of cigarettes as the United States moved into that position. Bulgaria's exports are estimated to have increased 2 percent, with the primary market still the USSR.

BRAZIL. Brazilian cigarette production increased 10 percent in 1977 and consumption continued its rapid increase. Because of the extremely high tariffs, very little foreign tobacco is used in Brazilian cigarette blends. The same import barriers keep foreign cigarette brands from entering the Brazilian market.

Cigarette prices, which are set by the Government, are expected to increase again this year. Currently, the retail price for a pack of 20 cigarettes ranges from 30 to 77 U.S. cents and the average price is around 52 cents.

Continued expansion of cigarette consumption is expected in the new term with 1978 output expected to be in the upper end of the 90-137 billion piece estimate. The rapidly growing domestic cigarette market may tend to restrict leaf supplies available for export.

INDIA. Cigarette production increased marginally in 1977 but the share of filter tips declined substantially—from 44 percent in 1976 to 21 percent. The production of bidi (inexpensive cigarettes wrapped in a tree leaf) is estimated to have reached 250 billion pieces in 1977. The retail price of the reportedly largest selling brand of cigarettes rose 14 percent from February 1977 to April 1978.

The outlook for 1978 is for a marginal increase in production, which should be in the low end of the 63-82-billion-piece estimate. Bidi production will likely increase from the 1977 level.

CANADA. Continuing an uptrend, Canadian cigarette production rose an additional 6.5 percent over the 1977 level. Low-tar and nicotine cigarettes continued to grow in popularity and captured 18 percent of the total market during the past year. Regular-size filter cigarettes continue to hold the major share of the market as plain-tipped cigarettes now account for less than 10 percent of sales.

Reflecting both an increase in the manufacturers' price to wholesalers in late 1977 and a provincial budget increase in the Ontario tax on cigarettes in early March 1978, the retail price of a package of 20 domestically produced cigarettes at Ottawa on May 1, 1978, ranged between 92 U.S. cents and US$1.01. Output in 1978 may increase little from the 1977 level.

INDONESIA. Clove-flavored (kretek) cigarettes continue to be favored in this market. These cigarettes caused an increase in production of 17 percent in 1977. The kretek market share has grown from 45 percent to nearly 65 percent in the last 5 years. White cigarette production, reflecting the declining market share, dropped 5 percent during 1977.

Kretek cigarettes continue to grow in popularity despite their retail price, which is nearly double that for white cigarettes. Currently the leading brand of kretek cigarette sells for 48 U.S. cents for a pack of 10. The leading white cigarette brand has a retail price of 42 cents for a pack of 20.

REPUBLIC OF KOREA. Korean cigarette production realized a 6 percent increase in 1977. Filter-cigarette production increased by 12 percent while nonfilter production decreased by 18 percent.

It is expected that the growth in domestic cigarette consumption and the switch to filters will continue in 1978, with output forecast near 62 billion pieces.

TURKEY. Total cigarette output in 1977 attained a level 7 percent higher than that of 1976. The filter-tip share of the market remained at around 42 percent.

Local demand for cigarettes continues to exceed the supply and the monopoly is making preparations to increase its processing capacity.

PHILIPPINES. Cigarette production in 1977 realized only a marginal increase over the 1976 level. The increase was less than half of the population growth rate of 2.8 percent. Real wages have declined every year except one since 1970. This erosion of purchasing power is believed the reason for the slow growth of cigarette sales. Production of American-blend cigarettes was up 5 percent, while native cigarette production declined 13 percent.

Small cigarette manufacturers, producing local brands, are losing out to large companies who have licensing agreements with American firms. These firms produce U.S. brands as well as their own brands. Currently the largest manufacturer of American cigarettes accounts for about 60 percent of total production.

The outlook is for an increase in consumption of American-blend cigarettes. However, it is expected that the growth rate of all cigarettes will remain less than population growth because of the reduced purchasing power of the Philippine consumer.

SWITZERLAND. Swiss cigarette output rose 10 percent last year with a strong export market. Domestic sales increased about 3.8 percent, primarily because of higher tourist and border traffic. Higher prices in West Germany made Swiss cigarettes an attractive alternative.

Current retail cigarette prices range from 67 to 79 U.S. cents per pack of 20. Sales in the higher priced range jumped 22 percent in this past year. The bulk of cigarettes sold were filter tipped, reaching approximately 94 percent in the past year.

Switzerland remained the fourth largest exporter of cigarettes in the world as its exports increased 11 percent. Belgium-Luxembourg became the largest market for Swiss cigarettes, replacing Yugoslavia, whose purchases dropped 37 percent. The EC imported almost 39 percent of the total Swiss cigarette exports in 1977, compared to 29 percent in 1976.

IRAN. Iranian cigarette imports continued their dramatic increase of the past few years with expanded purchases totaling 9.4 billion units. Over 96 percent of these imports are of U.S. origin.

Cigarette consumption is expected to increase further in 1978 with American filter brands leading the way.

HONG KONG. Hong Kong registered a 16 percent drop in cigarette imports in 1977, but the United States remained its major supplier. The market share for U.S. cigarettes increased from 79 percent in 1976 to 83 percent in 1977.

The retail price for the leading foreign brand is 48 U.S. cents, compared with 30 cents for locally manufactured cigarettes. Only a modest increase in cigarette imports is expected in the current year.

World Outlook

Cigarette output in the current year will likely increase 1-2 percent to about the 4.2-billion-piece level. Increased antismoking drives in some countries may be offset by some moderation of such activity in others. Although cigarette prices are rising worldwide, the rate of increase is generally less than the overall inflation rate. This, combined with the relatively inelastic demand for cigarettes, may negate the overall effect of any price increases.

The poor sales experience in the United Kingdom of cigarettes containing synthetic tobacco is expected to discourage the introduction of similar blends in other countries. With no indicated price, tax, or health benefit, the cigarette brands containing synthetic products have been little more than a novelty to the average smoker.

The worldwide trend toward blended cigarettes will likely continue in 1978 as will the switch to lower tar and nicotine (lighter) cigarettes. There is some evidence that the momentum of the switch to light cigarettes may be slowing in some countries as the market share approaches the 20-30 percent level.

This circular was prepared in the Tobacco Division, Foreign Commodity Analysis, Foreign Agricultural Service, USDA. Further information may be obtained by writing the Division or telephoning (202) 447-5491.

1/ INTERCEPT - TREND VALUE OF PRODUCTION WHEN X EQUALS ZERO (I.E.: X - 0 = 1959). 2/ SLOPE - THE CHANGE IN THE TREND VALUE OF PRODUCTION FOR A ONE UNIT CHANGE IN TIME (I.E.: ANNUAL CHANGE). 3/ A VALUE BETWEEN 1 AND -1 THAT MEASURES THE DEGREE OF LINEAR ASSOCIATION BETWEEN TIME AND PRODUCTION. THE LARGER THE ABSOLUTE VALUE OF (r), THE HIGHER THE DEGREE OF LINEAR ASSOCIATION BETWEEN THEM. 4/ A MEASURE OF THE AMOUNT OF VARIATION OF THE ACTUAL PRODUCTION FROM ITS TREND VALUES. 5/ NINETY-FIVE PERCENT CONFIDENCE INTERVAL: IT CAN BE SAID, WITH 95 PERCENT CONFIDENCE, THAT THE CIGARETTE PRODUCTION WILL FALL WITHIN THE INTERVAL.

MARKET PROSPECTS FOR TOBACCO IN THE SOVIET UNION

Summary

The Soviet Union in recent years has undertaken measures to "modernize" its tobacco industry. The 10th Five Year Plan (1976-80), the first to give detailed attention to the tobacco producing and manufacturing sectors, calls for a substantial increase in production of filter cigarettes accompanied by a reduction in output of nonfilter cigarettes and a sharp cutback in papyrosa—a cigarette consisting of a long hollow paper tube attached to a short column of tobacco. The Plan also calls for a significant increase in leaf tobacco production by 1980.

The Plan and related actions appear to reflect to some extent pressures of consumerism in a growing Soviet demand for cigarettes, including Western-style blends—and efforts to hold or divert employment from tobacco growing, processing, and manufacturing into other sectors, to reduce leaf and cigarette import dependency, and to guard against possible shortfalls in production of the types of tobacco traditionally used in Soviet cigarettes.

Five Year Plan goals have implications for Soviet leaf production and trade between now and 1980 and certainly in the period beyond. Soviet tobacco production will have to expand and perhaps shift from sun-cured oriental varieties to heavier yielding flue-cured and light air-cured varieties. And, if indicated Soviet demand for cigarettes is to be met, manufacturing efficiencies (leaf utilization) will have to improve in order to hold or reduce important requirements from past years' levels. But any change in Soviet trade patterns to include imports from nontraditional suppliers, e.g., the United States, will probably depend more on political decisions than on economic considerations.

Cigarette Output and Consumption Rising

Indicated Soviet consumption of cigarettes and papyrosa—domestic output plus net trade—was 430 billion pieces in 1976, 10 percent below that of 1975 and 5 percent lower than the 1971-75 average. Domestic production accounted for 87 percent of indicated consumption, imports the remainder.

The current Five Year Plan (1976-80) calls for tripling 1975 output of filter cigarettes, a 28 percent cut in nonfilter cigarettes, and a one-third reduction in papyrosa, the traditional Russian cigarette. Planned production of cigarettes and papyrosa in 1980 is 440 billion pieces, one-fifth more than in 1975.

Trend-line linear projections of Soviet cigarette and papyrosa production would place total output at 413 billion pieces in 1980—27 billion pieces below the Five Year Plan goal. Projected output of filter cigarettes would be 96 billion pieces below planned output, but projected output of nonfilter cigarettes and papyrosa would be 39 billion and 31 billion higher than the 1980 goal.

The differences between projected output and Five Year Plan goals could be a measure of the Soviet Union's intent to modernize its cigarette manufacturing industry. The planned shift from papyrosa and nonfilter cigarettes to filter cigarettes could be in response to changing consumer preferences and may reflect efforts to reduce raw tobacco requirements per cigarette.

Leaf Requirements for Cigarettes Will Grow

Information on tobacco weight and composition by leaf type of Soviet cigarettes is not readily

available. However, leaf production and trade give an idea of the quantities and types available for cigarettes.

Soviet cigarettes generally contain more tobacco than do typical West European or U.S. cigarettes. Papyrosa contain less. Assuming that 1.13 kg of tobacco is needed to make 1,000 nonfilter cigarettes, .91 kg for 1,000 filter cigarettes, and .57 kg per 1,000 papyrosa enables estimation of tobacco requirements for planned and projected cigarette output through 1980. Based on these assumed weights, cigarette leaf requirements of 322,000 tons in 1976 would rise to about 395,000 tons in 1980 under the Five Year Plan. Trend-line cigarette and papyrosa production in 1980 would require somewhat less tobacco, about 370,000 tons.

However, if tobacco content per cigarette were to be reduced—for example, to the level of U.S. cigarettes (about .8 kg per 1,000)—planned Soviet cigarette and papyrosa output in 1980 would require only about 330,000 tons of tobacco. A reduction of this magnitude would give Soviet planners flexibility with regard to leaf production and imports of both leaf and cigarettes, but is not likely to be achieved by 1980.

Leaf Production and Trade May Expand

The Soviet Union is the world's leading producer of oriental tobacco. This type accounts for about 93 percent of Soviet production, which in recent years has averaged about 275,000 tons (dry weight) annually. The balance is dark tobacco (makhorka) for use in water pipes and in other tobacco products.

In addition, the Soviet Union is a substantial net importer of tobacco, imports averaging about 85,000 tons in recent years. A breakdown of imports by leaf type is not available, but based on country of origin the bulk appears to be oriental leaf. This type, therefore, probably makes up 90 to 95 percent of the raw tobacco available for cigarette manufacture.

Assuming that 90 percent of domestic leaf production and all imported leaf goes into cigarettes and papyrosa, domestic cigarette leaf production and net imports in recent years appear to have been not quite sufficient to meet estimated requirements for cigarettes and papyrosa, requiring an apparent drawdown in stocks.

The Soviet Journal "Tabak" reports planned domestic leaf production of 380,000 tons farm-weight basis by 1980. This would require a crop one-fourth larger than the 1972-76 average and about one-fifth larger than the record 1974 harvest. This level of leaf production would provide about 308,000 tons of dry-weight leaf for cigarette requirements. The Five Year Plan goal of 440 billion cigarettes and papyrosa would require 395,000 tons of cigarette leaf if the plan is to be achieved. Thus, by 1980 cigarette leaf import requirements would be around 87,000 tons unless tobacco content per cigarette is reduced.

Trend-line projections of Soviet Union tobacco production by 1980 would provide about 277,000 tons of dry-weight leaf available for cigarettes and papyrosa. Compared to a total requirement at the assumed rate of utilization of 370,000 tons for the trend-line projected cigarette and papyrosa output (413 billion pieces), there would be an import requirement for cigarette leaf of about 93,000 tons.

Alternatives to meeting the indicated shortfall through expanded imports would be to step up leaf production, either through an increase in hectarage or a change to higher yielding varieties, or to reduce the tobacco content per cigarette. There is evidence that both alternatives are being employed.

Land Reallocation May Affect Tobacco

Prospects for achieving the planned level of production by 1980 may be uncertain if traditional leaf types are continued. Oriental tobacco production, particularly of classical varieties, is more labor intensive and yields are lower than for other major cigarette leaf types. Although the Soviet Union produces mostly broad leaf semi-orientals, which are higher yielding and more adaptable to mechanization, estimated yields in the USSR historically have ranged 25 to 35 percent below flue-cured and burley yields in the United States, for example.

A 20 to 25 percent expansion in Soviet Union tobacco area by 1980 may be problematic. Much of the country lies in a short growing season zone, with approximately 90-125 frost-free days. Productive land under these conditions is relatively scarce. And as expanding Soviet food and fiber needs demand more of the productive land areas, there is constant pressure to shift land in the milder climate zones into food production. The land areas most likely to be affected are the tobacco producing areas in Moldavia, Georgia, the Crimea, Krasnodar Kray, Armenia, and Azerbajdzhan. In recent years a significant number of new vineyards, orchards, and vegetable farms have been established in these regions. Continuation of this development could mean a decline in tobacco area.

As an apparent hedge against such a possibility, the Soviets have contracted with U.S. and West European firms to supply leaf production (and cigarette manufacturing) technology. Experimental production of heavier yielding flue-cured and light air-cured tobacco varieties is underway. But the time required to adopt new varieties and to develop production, harvesting, and curing techniques on a large scale is considerable. A large-scale shift from oriental leaf production does not appear probable by 1980.

Preferences Could Be Changing

There are indications that Soviet smokers prefer blended cigarettes, as opposed to traditional cigarettes and papyrosa containing largely oriental leaf. For several years Western tobacco companies awaited a Soviet decision to manufacture blended cigarettes. During the early stages of the ninth Five Year Plan (1971-75), Soviet planners decided to produce a blended cigarette. Articles in "Tabak" have since discussed blended cigarette production and one U.S. company recently licensed the first American brand to be produced in the Soviet Union. The agreement specifies that the brand initially contain 100 percent U.S. tobacco. The Soviets will deliver domestic tobacco of an equivalent value, probably for use in the company's international plants. Other Western companies are negotiating with Soviet officials for manufacture of their brands on a similar basis.

Recent purchases of state-of-the-art leaf processing, cigarette making, and packaging machinery from Western manufacturers would indicate that a higher priority is now being assigned to this industry than has previously been the case. But, it does not necessarily signal a large-scale shift from traditional oriental cigarettes to blends.

As encouraging as these developments may appear, blended cigarette output is likely to remain small in relation to the total, and distribution restricted to urban areas in northern and western USSR and to tourists. A broader shift must probably await Soviet production of the leaf types needed for blended cigarettes.

Trade Implications

The Soviet Union is likely to remain a net importer of leaf tobacco and cigarettes through 1980. The quantity of imports could vary depending on whether planned cigarette output and leaf production goals are met or whether long-term trends prevail.

Cigarette imports likewise could vary widely depending on whether or not per capita consumption continues to trend upward, i.e., whether or not cigarettes are made available to meet demand. To meet the trend-line increase in per capita consumption would require 504 billion cigarettes and papyrosa by 1980, given a population of 266.9 million. Assuming the cigarette output goal of 440 billion is met, an import requirement of 64 billion cigarettes is indicated. If, however, the available supply of cigarettes holds per capita consumption to about the 1976 level, and cigarette and papyrosa output goals are attained, cigarette imports could be as low as 5-10 billion pieces.

Trade Patterns May Hold

In past years the Soviet Union has relied on only a few suppliers for most tobacco imports. Bulgaria, Yugoslavia, India, Greece, and Turkey have been the principal suppliers. Oriental leaf appears to be the main type traded except for tobacco from India, which is mostly flue-cured. Bulgaria, under long-standing arrangement, supplies the great part of cigarette imports.

Although U.S.-USSR agricultural trade generally has increased in recent years, trade in tobacco and tobacco products between these two major producers remains but a trickle. The fact that the United States does not extend most-favored-nation (MFN) tariff treatment and Export-Import Bank credits to the USSR, and the Soviets' apparent reluctance to allocate "hard" foreign exchange for importation of tobacco—opting instead to import from COMECON partners and from developing countries under bilateral agreements—has affected development of U.S.-USSR tobacco trade.

Trade would appear feasible. The United States is the world's leading exporter of light cigarette leaf (flue-cured and burley) and the leading importer of oriental, the three principal types of leaf used in blended cigarettes. The Soviet Union is the leading producer of oriental tobacco. But U.S.-USSR trade is not likely to develop in the absence of a Soviet decision to sharply expand and upgrade its production of high-quality blended cigarettes. Such a decision would appear unlikely in the 3-4 year period ahead.

August 1978

WORLD TOBACCO TRADE DOWN IN 1977

World tobacco exports fell 5 percent in 1977 to 1.27 million tons. Higher shipments from the United States, Brazil, and South Korea were more than offset by lower exports by other countries.

With trade in oriental leaf expected to revive, the outlook for 1978 is for a slight recovery in world exports to about the 1.3-million-ton level. Flue-cured and burley exports also are expected to rise, but U.S. shipments may slip because of poor quality of the 1977 crop.

Principal Trading Countries

United States. Exports gained 9 percent in 1977 compared with those of 1976, with exports in December setting a record for a single month. A large part of Japan's purchases from the 1977 crop moved in December, following the October-November dock strike, as Japan maintained its position as the leading export market for U.S. tobacco. Exports to West Germany, the No. 2 market, rose 7 percent, but shipments to the United Kingdom fell by nearly one-third.

Flue-cured exports, which make up three-fourths of the U.S. total, rose 9 percent. Burley exports increased 17 percent to set a calendar year record. Fire-cured exports also grew by 17 percent.

Arrivals of unmanufactured tobacco in the United States dropped 12 percent as importers resisted high oriental leaf prices. Oriental imports fell 26 percent overall and imports from Turkey, the largest supplier, fell 40 percent. Arrivals of flue-cured and burley leaf and scrap tobacco were up.

Duty-paid imports, in contrast with arrivals, rose slightly to 143,000 tons pushed upward by scrap imports. U.S. imports of both oriental and cigar leaf fell. Stocks of imported tobacco on January 1, 1978, were 6 percent below those of a year earlier as duty-paid withdrawals exceeded arrivals during 1977.

The outlook for 1978 is for a decline in exports to about the 1976 level of 266,000 tons. Shipments to Japan and West Germany are expected to fall, but the United Kingdom may take more than in 1977 if manufacturers replenish their stocks. U.S. imports for consumption are expected to continue to rise and arrivals will likely recover as U.S. manufacturers and leaf dealers rebuild stocks drawn down in 1977.

The European Community remained the largest aggregate tobacco market in the world during 1977, taking an estimated 41 percent of total world imports. However, purchases by the nine members fell 6 percent as France cut its imports in half.

West Germany was the leading tobacco importer in 1977, its imports (actual arrivals) increasing by 2.8 percent to 171,902 tons. This slight recovery in German imports, after a 6.6 percent drop in 1976, reflects an improved outlook for sales of tobacco products following the impact of the large tax/price hike in early 1977. The strength of the Deutsche mark, especially in the second half of 1977, also may have stimulated purchases.

Actual arrivals of U.S. leaf increased 10.7 percent; a significant portion of Germany's purchases from the 1976 crop did not move until 1977. Lower purchases from the 1977 crop will be reflected in 1978 trade. Duty-paid imports of U.S. leaf fell 6 percent. The German cigarette industry is estimated to have used 9 million pounds (12 percent) less U.S. leaf in 1977 compared with the 1976 level. Use of U.S. flue-cured tobacco fell 17.5 percent during 1977, while that of burley rose.

The outlook is for a slight increase in German imports, both arrivals and duty-paid. Arrivals of U.S. leaf likely will fall and duty-paid imports will do well to hold steady. However, strengthening of the Deutsche Mark and a recover in cigarette sales could support demand for U.S. tobacco.

United Kingdom. Imports from United States dropped 33 percent in 1977 plunging the U.S. market share 8 points to 16.5 percent as U.K. manufacturers continue to shift toward suppliers of less expensive tobacco; e.g., India, Thailand, Malawi, South Korea, and Brazil. However, as the U.K. industry replenished stocks drawn down during recent years, (U.S. shipments to the U.K. soared 215 percent in the first 5 months of 1978. These larger shipments, combined with a stronger pound sterling and a more optimistic outlook for cigarette sales, may mean larger purchases from the United States in 1978.

Netherlands imported 11 percent more tobacco in 1977. Imports from the United States, helped by dollar devaluation, rose 18 percent to 13,470 tons.

Imports are expected to slip in the current year because of reduced use and more ample carry-in stocks. Leaf use is expected to be down because of widespread cigarette hoarding that followed the announcement late in 1977 of a price increase to take effect early in 1978.

Belguim-Luxembourg imported 39,285 tons in 1977, down 5 percent from last year's total, despite a 36 percent increase in transshipments from the Netherlands. The United States remained the largest single supplier although its market share dropped 2 points to 16 percent, because of lower imports of U.S. flue-cured. Imports from Mozambique, an important source of East African tobacco, dropped 54 percent.

Imports of leaf tobacco during 1978 are forecast at about 40,000 tons, or the same as in 1977. Whether the United States holds its share of this market will depend on the price and availability of U.S. leaf.

France's imports fell 53 percent in 1977. Unusually high beginning stocks in 1977 and an 11 percent decline in manufacturer's use during the year held down the need for imports. Stocks built up during 1976 were drawn down by 20,000 tons during 1977. Imports from all destinations except Africa fell, with U.S. leaf off by two-thirds. South American countries (Argentina, Paraguay, and Brazil) are still the leading suppliers to France.

France's imports are forecast at 55,000 tons in 1978, based on an expected use of 95,000 tons, the level of beginning stocks, and a projected domestic crop of 55,000 tons.

Italy's leaf exports declined 24 percent to 40,535 tons in 1977, while imports rose 1 percent to 33,730 tons. Italian exports have been declining since 1974 when they reached a record 64,545 tons. Export subsidies were increased in 1977.

Imports have stabilized over the past 4 years. Imports from the United States, Italy's main supplier, fell 10 percent in 1977, the first decrease in several years.

The outlook for 1978 is for stable imports and a slight recovery in exports. The U.S. share of imports is expected to remain steady.

Brazil's exports reached a record 108,111 tons in 1977 of which 85,000 tons were cigarette leaf. Dark cigar tobacco exports from Northern Brazil dropped one-fourth, reflecting the 1976 drought in that region.

The quality and quantity of Brazil's flue-cured tobacco have improved substantially over the past several years. Prices have remained relatively low. However, rapid expansion of domestic cigarette consumption is absorbing an increasing proportion of Brazil's cigarette leaf supplies and is beginning to reduce the price advantage of Brazilian leaf in foreign markets.

Exports are forecast to drop to 100,000 tons in 1978. The quality and availability of leaf are expected to continue to improve, but at a less dramatic pace than during the past 10 years.

Japan's imports dropped 10 percent in 1977 reflecting the Japanese Tobacco and Salt Corporation's (JTS) efforts to reduce stocks to more manageable levels. The United States remained the principal supplier with 55 percent of the market.

The JTS considers 24-months' supply to be optimum. During 1977, stocks reportedly reached a 30-months' supply level. Most of the leaf was poorer quality domestic tobacco.

JTS purchases during 1978 are not expected to increase significantly above the 1977 level. Although the yen is strengthening, JTS efforts to reduce stocks could hold imports to 85,000-90,000 tons in 1978.

INDIA had a record year for tobacco export earnings in 1977. Exports amounted to $130.2 million, 14 percent above the 1976 level, despite a 5 percent decrease in the quantity exported. Export earnings were boosted by increases in the Government-administered minimum prices by an average of 13 percent over 1976 levels. The USSR and the U.K., the top two markets, both increased their purchases from India during 1977 to nearly three-fourths of India's exports.

India's exports are forecast in a range of 70,000 to 75,000 tons for the current year because of anticipated lower exports to both these top markets.

Spain and the **Canary Islands** together imported 64,467 tons in 1977, down 21 percent from the 1976 level, as manufacturers' use fell. Major suppliers were Cuba, Brazil, and the Dominican Republic. The United States supplied 10 percent of total imports. Most U.S. tobacco is blended strips for the production of one brand of cigarettes.

Cigarette production is expected to expand in 1978 because of economic improvement. This should lead to larger leaf tobacco imports. Recent cigarette price increases are expected to encourage consumption of less expensive domestically produced American-blend cigarettes, which would mean increased imports of U.S. leaf and perhaps fewer imported cigarettes.

Turkey's export volume dropped 18 percent in 1977, export value fell more than 30 percent compared with that of 1976. Surplus stocks reached record levels, resulting in lower prices, a situation that may force the Government to expand export assistance measures. The United States remained the leading market for Turkish leaf taking 46 percent of the total.

Exports should be up slightly in 1978, assuming U.S. buyers take more leaf. However, buyers ary expected to react conservatively in an attempt to obtain more favorable buying conditions. In addition to being a burden on the Treasury, Turkey's stocks have reached a level that makes proper storage and handling very difficult.

Greece's tobacco exports slipped 4 percent as a 3,644-ton increase in burley shipments was more than offset by a 5,928-ton decline in oriental exports. U.S. imports fell by more than 50 percent as buyers resisted the high prices. Most of the 1976 crop (normally sold during 1977) remained unsold through December 1977, as stocks reached record levels.

Exports are expected to recover in 1978 as prices moderate and major buyers rebuild stocks drawn down during 1977.

South Korea's tobacco exports totaled 48,549 tons in 1977, an increase of 16 percent from the previous year's. Of the total, 26,663 tons were flue-cured and 17,044 tons were burley. In recent years, Korea's exports have been limited only by the availability of supplies. The increase in 1977 exports resulted from abundant harvests over the past 2 years. The U.K. was the principal buyer in 1977. taking 15,606 tons. The United States ranked second, taking 11,061 tons.

Korea's export plan for 1978 forecasts a 39 percent increase in exports to 65,100 tons; of this total 37,200 tons will be flue-cured and 27,900 tons will be burley.

Switzerland. Imports jumped 18 percent in 1977 with purchases from the United States up 14 percent. Increased use, a strengthening Swiss Franc, and the adoption of a more rapid shipping system by a major cigarette producer all contributed to the increase in import volume. The outlook for 1978 is for stable imports. However, a reduction in cigarette output following the scheduled 20-percent tax increase in October could influence manufacturers' purchases in the current year.

Canada. Exports were down 10 percent in 1977. Although exports to the United Kingdom fell 14 percent, the U.K. remained the predominant market taking 61 percent of total shipments. Declining consumption in the U.K. and the ending of Canada's Commonwealth preferential trade status are major factors behind the reduction in Canada's trade with the U.K.

Exports in 1978 are estimated at 45,000 tons. However, the weak Canadian dollar and export rebates payable on the 1977 and 1978 crops should help Canada's exports this year.

The Philippines. Imports of unmanufactured tobacco—almost all flue-cured—during 1977 increased 12 percent, with over two-thirds of the total coming from the United States.

Exports during 1977 were off 8 percent because of reduced production and the poor quality of the crop. Exports are expected to drop 7 percent in 1978 to 24,000 tons because of a continuing decline in production. Flue-cured tobacco shipments are expected to increase but exports of cigar tobacco will likely decline.

Mexico's exports of unmanufactured tobacco were up 4 percent in 1977 compared with those of 1976. Light cigarette leaf tobacco accounted for 82 percent of total exports. The United States is the principal buyer of light leaf, taking 75 percent of exports in 1977. West Germany and Japan were the other major markets. Dark cigar tobacco shipments also were up; the United States was the major buyer with 54 percent of the total. Exports during 1978 are expected to increase 7 percent to about 20,000 tons.

Thailand. Leaf tobacco exports in calendar year 1977 fell 18 percent as most major destinations including the United States took less. The Thai industry is still burdened with over supplies of poor-quality leaf.

Thailands' imports of unmanufactured tobacco increased 56 percent in 1977. Most of this tobacco was stripped leaf from the United States.

Both exports and imports are expected to increase in 1978.

Australia. Imports during 1977 rose 25 percent as purchases from the United States reached 6,447 tons, 39 percent more than in the previous year. The U.S. market share jumped from 51 percent in 1976 to 56 percent in 1977. Imports from Brazil doubled and South Korea increased sales by 57 percent. Increased manufacturers' use and lower 1977 beginning stocks are largely responsible for the stronger market.

Total imports in 1978 are expected to increase slightly, with the U.S. share improving relative to other suppliers. Short term CCC credit, relatively high prices in competing countries and storage and shipping uncertainties associated with the current political situation in Africa are plus factors for U.S. exports.

The Republic of China (Taiwan). Imports of unmanufactured tobacco rose 8 percent during 1977. Purchases from the United States jumped 60 percent, pushing the U.S. market share from 46 percent in 1976 to 66 percent in 1977. Korea and Thailand were the other major suppliers.

The current trend in Taiwan is toward high-quality cigarettes and imports of U.S. leaf should increase in the midterm compared with those from other suppliers.

tobacco

FT 6-78
August 1978

WORLD TOBACCO PRICES ROSE IN 1977

World tobacco prices were generally higher in 1977 than in 1976. Strong world demand for the flue-cured and burley types resulted in significantly higher grower prices in most major producing countries. High global stocks, however, have temporarily stabilized prices for oriental tobacco.

Import prices during 1977 were sharply higher in most major importing countries as the tobacco moving in world trade reflected the higher grower prices of 1975 and 1976. The respective price increases in the four leading world tobacco markets of West Germany, the United Kingdom, the United States, and Japan were 11, 38, 19, and 13 percent when expressed in U.S. dollars.

Strong demand for export-quality tobacco and world inflationary pressures are expected to push the general tobacco price level up significantly again during the current year. U.S. flue-cured auction prices during the first two weeks of sales were more than 40 percent above the comparable year-earlier period.

U.S. LEAF-TOBACCO VALUE SETS RECORD IN 1977/78, VOLUME LOWER

Summary

The net contribution of tobacco to the U.S. foreign trade balance rose 6 percent to more than $1.4 billion in fiscal 1978 (Oct. 1, 1977-Sept. 30, 1978) attesting to the importance of this trade to the U.S. tobacco industry and the U.S. economy. New records were set as exports went to $1,838 million and imports to $419 million. Although tobacco imports have increased significantly in recent years, exports have grown faster in absolute terms. The value of last year's imports was less than one-fourth that of exports.

Despite a 6 percent drop in volume, leaf exports during fiscal 1978 reached the record value of $1.13 billion. Volume, although below the 1977 level, was above that of 1976 and average 1971-75 Oct.-Sept. levels. In anticipation of the October-November 1977 dockworker strike some exporters shipped tobacco during the last quarter of fiscal 1977 that normally would have moved early the next year, thus, distorting trade figures for both years.

Manufactured tobacco exports continued the strong uptrend of recent years, reaching $706 million. Cigarettes, which accounted for 98 percent of the total product value, were up 13 percent in value and 3 percent in volume. The weaker U.S. dollar more than offset the effect of higher U.S. cigarette prices in fiscal 1978.

Because of higher U.S. cigarette output and some stock building, unmanufactured leaf tobacco imports also continued the uptrend of recent years. Duty-paid imports for consumption reached a record 150,910 tons valued at $371 million, up 8 and 18 percent respectively when compared with 1977 figures.

Because of a change in export classification during 1977, blended, stripped leaf tobacco is now shown in the export category, **Other Unmanufactured Tobacco NEC**, a change that should be considered when comparing fiscal 1978 with earlier years. Previously this tobacco was classified as **Bulk Smoking Tobacco**, a manufactured product. As a result of this change the **Other Unmanufactured Tobacco NEC** category increased from 14 tons in fiscal 1977 to 5,011 tons in fiscal 1978 and **Bulk Smoking Tobacco** fell from 5,897 tons to 800 tons during the same period.

Exports By Major Type

FLUE-CURED tobacco accounted for almost two-thirds of leaf export volume in fiscal 1978 despite a 7 percent drop in volume. Value, however, rose 7 percent as the average price per kilo jumped 16 percent to a record $4.86. The higher average price reflects: 7 percent higher auction prices in 1977; higher processing costs; and a larger portion of exports in stemmed form. Seventy percent of fiscal 1978 shipments were stemmed compared with 65 percent a year earlier. The export price of the stemmed leaf averaged $5.16 per kilogram (kg) compared with $4.17 per kg for unstemmed leaf.

The outlook for flue-cured tobacco exports in fiscal 1979 is favorable. The large crop of high quality flue-cured harvested in 1978, a relatively weak U.S. dollar, and low

stocks of U.S. flue-cured leaf held by many foreign buyers, could result in exports above the 186,000 tons shipped during fiscal 1977. Shipments to Japan and West Germany may not increase in the current year, but exports to the United Kingdom, the Netherlands, Belgium-Luxembourg, the Philippines, and several smaller markets could boost total exports of this type by more than 5 percent.

BURLEY exports rose 5 percent in value during fiscal 1978 despite a 3 percent drop in volume. On a farm-sales-weight equivalent basis, exports were unchanged from those a year earlier because of the higher proportion moving as stemmed leaf. The export price reached $4.56 per kg, 8 percent above the 1976 level. The auction price average of the 1977 crop was up 5 percent.

The burley export outlook for fiscal 1979 is for little change from the 1978 volume, but for substantially higher export value. Auction prices during the first week of sales averaged $2.92/kg, 9 percent above the 1977 level. This higher value will be reflected in fiscal 1979 exports, which may approach $200 million in value.

STEMS AND SCRAP exports fell in fiscal 1978 despite the higher portion of the flue-cured and burley crops moving as stemmed tobacco. Rising transportation costs may be discouraging the shipment of stems that have traditionally accompanied stripped leaf. The average value of stems has risen from 36 cents per kg during 1971-75 to 59 cents in 1978. Stems and scrap exports are expected to recover in the current year as total leaf exports increase.

OTHER TYPES exports were lower in fiscal 1978, compared with those of a year earlier. Supplies are larger, but higher domestic prices mean that in the coming year most categories will do well to match fiscal 1978 levels.

CIGARETTE exports continued the dramatic uptrend of recent years as shipments rose 3 percent to 70.1 billion pieces, with value up 13 percent to $691.7 million. The estimated farm-sales-weight equivalent of the tobacco contained in the cigarette exports was 62,000 tons—49,000 tons of U.S. leaf and 13,000 tons of imported tobacco.

Belgium-Luxembourg remains the largest export destination although shipments to this country fell 13 percent to 11.8 billion pieces. Almost all U.S. cigarettes entering Belgium-Luxembourg are transshipped to other European, Asian, and African countries. Some recovery is expected in this market in fiscal 1979.

Iran, second largest market, reduced purchases by 16 percent, largely because of a 13-percent retail price hike on imported brands, increased domestic production of the leading imported brand, and a buildup of cigarette stocks in fiscal 1977. The current political situation would indicate further erosion of this market in fiscal 1979.

Total cigarette exports in fiscal 1979 are forecast to move up to about 75 billion pieces and $760 million as most major markets are expected to take more. Cigarette exports now account for over one-third of the value of U.S. tobacco exports. This important trade category is expected to continue to increase relative to total tobacco exports.

Imports By Major Types

Duty-paid imports (for consumption) of leaf tobacco into the United States were up 8 percent in volume and 18 percent in value during the past year. Imports of **Scrap Tobacco** lead the increase, quantity jumping 13 percent and value 53 percent. The volume of **oriental type** tobacco imports was little changed from that of fiscal 1977, but value soared 13 percent. **Flue-cured and burley** imports were up 21 percent in quantity and 42 percent in value.

Duty-paid imports in fiscal 1979 are expected to rise to about 160,000 tons and $425 million. The trend of increasing flue-cured, burley, and scrap imports and stable oriental pruchases in expected to continue.

Arrivals of leaf tobacco (general imports) were up only 3 percent in quantity and 9 percent in value. Flue-cured and burley imports set the pace with a 19 percent jump in volume and one-third higher value. Cigar filler leaf, however, bucked the trend and dropped 35 percent in quantity and 22 percent in value.

Stocks Of Foreign Tobacco

The disproportionate increases during fiscal 1978 between duty-paid imports (up 8 percent) and actual arrivals (up 3 percent) resulted in 2 percent lower ending stocks of foreign tobacco in the United States than in the previous year. Stocks of foreign-grown cigar leaf and oriental were down 11 and 15 percent, respectively; those of flue-cured and burley rose 13 and 25 percent. This may indicate that actual use of cigar leaf and oriental was not down as much as import data indicated and use of flue-cured and burley may have been lower than shown by import data. U.S. manufacturers and dealers apparently are importing flue-cured and burley to build stocks and at the same time drawing down stocks of cigar and oriental leaf for current consumption. These decisions are likely based on expected price movements, anticipation of availability, and other factors that may influence trade in the near future.

December 1978

WORLD TOBACCO PRODUCTION UP 2 PERCENT IN 1978

World leaf tobacco output during 1978 reached 5.59 million tons. This is 2.6 percent above the revised 1977 world output of 5.45 million tons, but 1 percent below the record 5.66 million ton crop produced in 1976. The larger crop insures adequate supplies in 1979.

Oriental leaf production once again set the pace jumping 8 percent to partially recover from the 16 percent drop experienced in 1977. The 1978 crop is the second largest on record and will do little to relieve excess stocks that exist in many producing countries.

Global burley output reached a record 600,674 tons during 1978, up 3 percent from 1977 and 17 percent above the 1972-76 average. Spain accounted for more than half of the 18,000 ton increase.

World flue-cured output rose about 2 percent to 2.3 million tons. Among major flue-cured tobacco producers Canada, the U.S., Brazil and India all had larger crops. The quality of the U.S. flue-cured crop harvested in 1978 is described as the best in 4 years and will help relieve the tight supply situation for high quality flue-cured tobacco.

Production of both dark air-cured cigar and dark fire-cured leaf were lower in 1978. Cigar leaf output dropped 7 percent from the unusually large 1977 crop. Fire-cured production was down only 2 percent from the record 1977 crop and still 26 percent above the 1972-76 average.

Cigarette output during 1978 likely rose an estimated 2-3 percent worldwide and leaf use may have edged up 1 percent. The pace of world trade was higher in 1978 and world tobacco stocks are estimated to be about 100,000 tons above a year earlier.

UNMANUFACTURED TOBACCO: WORLD PRODUCTION BY MAJOR PRODUCING COUNTRIES, AVERAGE 1972-76, ANNUAL 1977 AND 1978 1/

(IN METRIC TONS)
